About Coffee

ORIGINS OF COFFEE

Coffee is more than just a drink—it's a global ritual. Originating from Ethiopia in the 9th century,

WHY PEOPLE LOVE COFFEE

Coffee is not only an energy booster but also a cultural symbol of conversation and productivity.

Bangladesh	Asia	2015	25	Other	Middle	Coffee	Americano	Modern	2.2	Both	High

Most individuals under 30 appear to prefer tea or coffee varieties like Milk Tea, Masala Chai, Mocha, etc.
There is variation in taste scores, sugar levels, and monthly spending, suggesting diverse preferences among younger users.

```
SELECT
gender, COUNT(gender) AS count
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC;
```

Result Grid | Filter Rows:

gender	count
Male	5054
Other	4974
Female	4972

The query calculates the total number of individuals for each gender category in the tcoff table, sorted from highest to lowest frequency.

```
SELECT
Country,
ROUND(AVG(monthly_spend), 2) AS
Average_spend_per_month
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC;
```

Country	Average_spend_per_month
Canada	53.41
UK	53.1
Spain	52.9
Pakistan	52.45
Japan	52.43
China	51.89
Australia	51.7
France	51.66
India	51.64
Bangladesh	51.63
Italy	51.63
Brazil	51.48
Germany	51.16
Egypt	51.02
USA	50.49

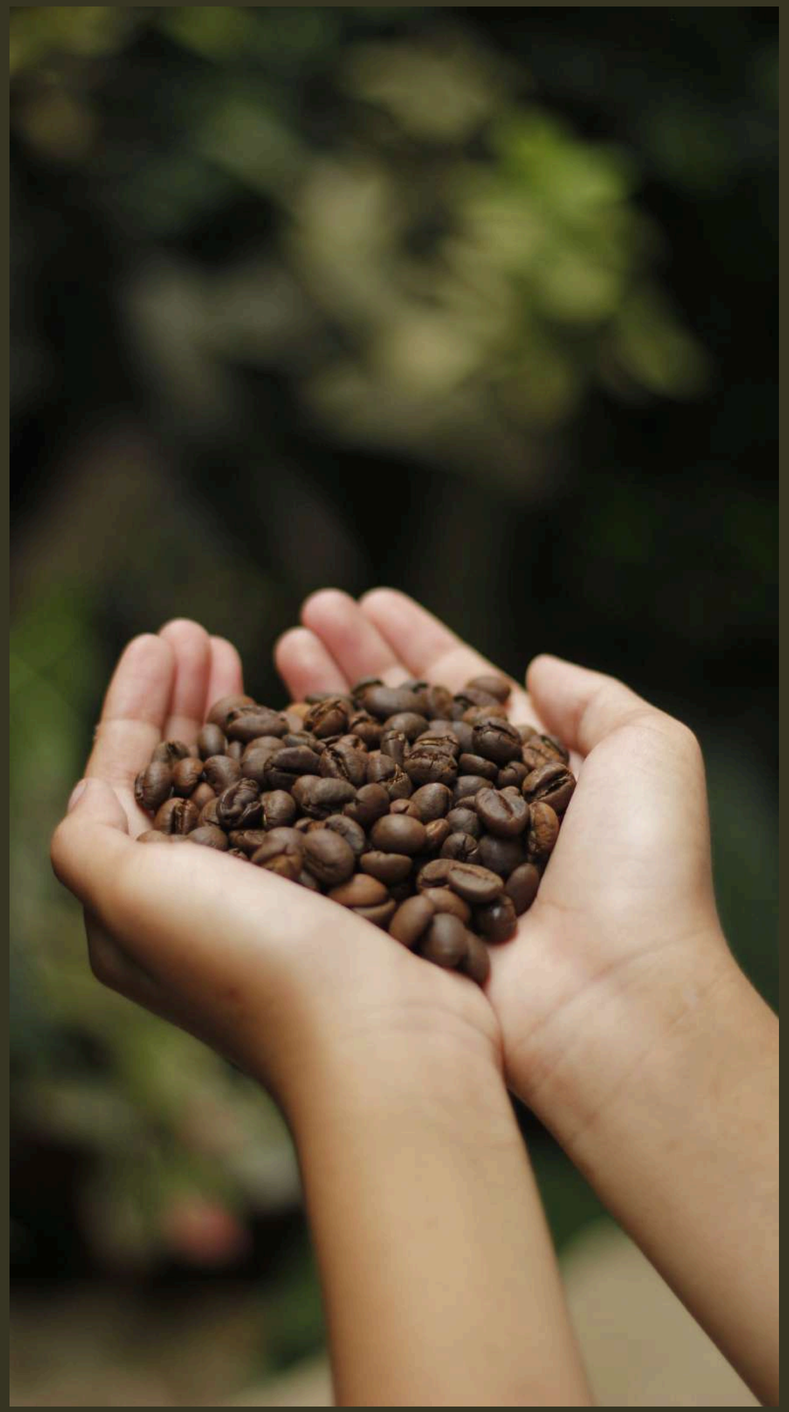
This query calculates the average monthly spending of customers for each country. The results are grouped by country, rounded to two decimal places, and sorted in descending order to identify the countries with the highest spending behavior.

```
SELECT
sugar_level, ROUND(AVG(bmi), 2) AS average_BMI
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC;
```

sugar_level	average_BMI
Low	26.58
No Sugar	26.5
High	26.45
Medium	26.38

Contextual Insight :

- The data shows that average BMI remains remarkably consistent across all sugar level categories.
- The "Low" sugar group has the highest average BMI at 26.58, while the "Medium" group has the lowest at 26.38.
- There is a very narrow range of only 0.20 between all groups, indicating sugar level has little impact on BMI in this dataset.
- All categories fall within the "Overweight" BMI range (25.0–29.9), regardless of their specific sugar intake level.



```
SELECT
country, COUNT(drink_preference) AS coffee_count
FROM
tcoff
WHERE
drink_preference = 'Coffee'
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Rows

	country	coffee_count
▶	Italy	575

Contextual Insight :

- This query is used to identify the country with the highest number of coffee-loving customers.
- It filters the dataset to include only those customers who prefer coffee.
- Then, it counts and groups the data by country and sorts the results in descending order.
- Finally, it displays the top country where coffee is most popular among customers.

```
SELECT
loyalty_brand AS Brand,
ROUND(SUM(monthly_spend), 2) AS Total_spend
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Rows:

Brand	Total_spend
Explorer	393216.3

Contextual Insight :

- *The Explorer brand has been identified as the top-performing loyalty category in the dataset.*
- *It achieved a significant total monthly expenditure of 393,216.30, leading all other brands.*
- *This brand serves as the primary revenue driver, outperforming competitors in customer spend.*
- *The analysis highlights Explorer as the most successful segment for capturing high-value transactions.*

```
SELECT
time_of_day, COUNT(drink_preference) AS count
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Ro

	time_of_day	count
▶	Evening	3827

Contextual Insight :

In a typical business scenario, this result suggests that your highest traffic occurs late in the day. If this were a coffee shop or bar, management might use this data to increase staffing levels or run "Happy Hour" promotions during the evening to further capitalize on this high volume.

```
SELECT
income_level,
favorite_drink,
COUNT(favorite_drink) AS favourit_drink_count
FROM
tcoff
WHERE
income_level = 'High'
GROUP BY 1 , 2
ORDER BY 3 DESC
LIMIT 1;
```

	income_level	favorite_drink	favourit_drink_count
▶	High	Mocha	230

- Strategic Insights :

- Product Selection: The data reveals that Mocha is the most popular choice among the high-income demographic (ordered 230 times). Based on this finding, the business should prioritize premium Mocha variants or related coffee products to cater to this preference.
- Targeted Marketing: To effectively attract high-income customers, Mocha can be promoted using luxury branding or premium packaging. This positions the product as a high-end choice that aligns with their lifestyle.
- Pricing Strategy: Since this specific group belongs to the high-income bracket, offering "Specialty Mocha" made with high-quality, gourmet ingredients at a premium price point is a viable strategy. This can significantly help in increasing overall profit margins.

```
SELECT
experiment_new_drinks,
COUNT(*) AS new_drink_use_customer_count
FROM
tcoff
WHERE
experiment_new_drinks = 'Yes';
```

Result Grid | Filter Rows: | Export:

experiment_new_drinks	new_drink_use_customer_count
Yes	7492

Contextual Insight :

Customer Adoption: The data shows a significant level of engagement with the "New Drinks" experiment. A total of 7,492 customers have opted to try the experimental beverages, indicating a high level of curiosity and openness to new flavors among your consumer base.

Operational Readiness: This large volume of participants suggests that any permanent addition to the menu would likely have an immediate audience. It provides a strong statistical foundation for the business to move from the "experiment" phase to a full-scale launch.

Business Opportunity: With nearly 7,500 customers participating, there is a massive opportunity to gather feedback. If these customers are satisfied, they represent a solid segment for loyalty programs centered around new product innovations.

```
SELECT
social_setting, COUNT(drink_preference) AS count
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC;
```

social_setting	count
Family	3767
Alone	3757
Friends	3749
Work	3727

Contextual Insight :

- Balanced Distribution: The data shows a remarkably even distribution across all social settings. Whether customers are with Family (3,767), Alone (3,757), Friends (3,749), or at Work (3,727), their drink preference remains consistent. This suggests that your product is highly versatile and fits into almost every aspect of a customer's life.
- Broad Market Appeal: Since no single category drastically outweighs the others, your brand appeals to diverse social contexts. It isn't just a "workplace coffee" or a "family treat"; it is a daily staple for various occasions.
- Strategic Marketing: Because the counts are so close, you have the flexibility to run multi-channel campaigns. You could promote "Family Packs" just as effectively as "Solo Study Sessions" or "Office Catering," as there is proven demand in each area.

```
SELECT
hydration_level,
COUNT(*) AS customer_count,
COUNT(cups_per_day) AS daily_per_cups
FROM
tcoff
GROUP BY 1
order by 1 desc;
```

Result Grid | Filter Rows:

hydration_level	customer_count	daily_per_cups
9	1701	1701
8	1618	1618
7	1633	1633
6	1675	1675
5	1651	1651
4	1712	1712
3	1691	1691
2	1635	1635
1	1684	1684

Contextual Insight :

- Consistent Engagement: The data shows a very steady distribution of customers across all hydration levels (from 1 to 9). Each level has roughly 1,600 to 1,700 customers, indicating that your brand appeals to everyone, regardless of how much water or fluid they typically consume in a day.
- High Hydration Segment: There is a slight peak at hydration level 4 (1,712 customers) and level 9 (1,701 customers). This suggests a significant portion of your audience is either actively health-conscious or naturally high-volume consumers.
- Marketing Opportunity: Since the counts are almost identical for every level, your product is "hydration-neutral." You can market your drinks both as a refreshing supplement for those with low hydration and as a guilt-free addition for those who are already highly hydrated.

```
SELECT
country, ROUND(AVG(taste_score), 2) AS avg_test_cups
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC;
```

country	avg_test_cups
Brazil	5.67
Spain	5.64
Canada	5.63
Bangladesh	5.61
Japan	5.59
France	5.57
Italy	5.56
China	5.54
Pakistan	5.54
UK	5.49
India	5.45
Egypt	5.45
USA	5.42
Australia	5.4
Germany	5.37

Concise Insight :

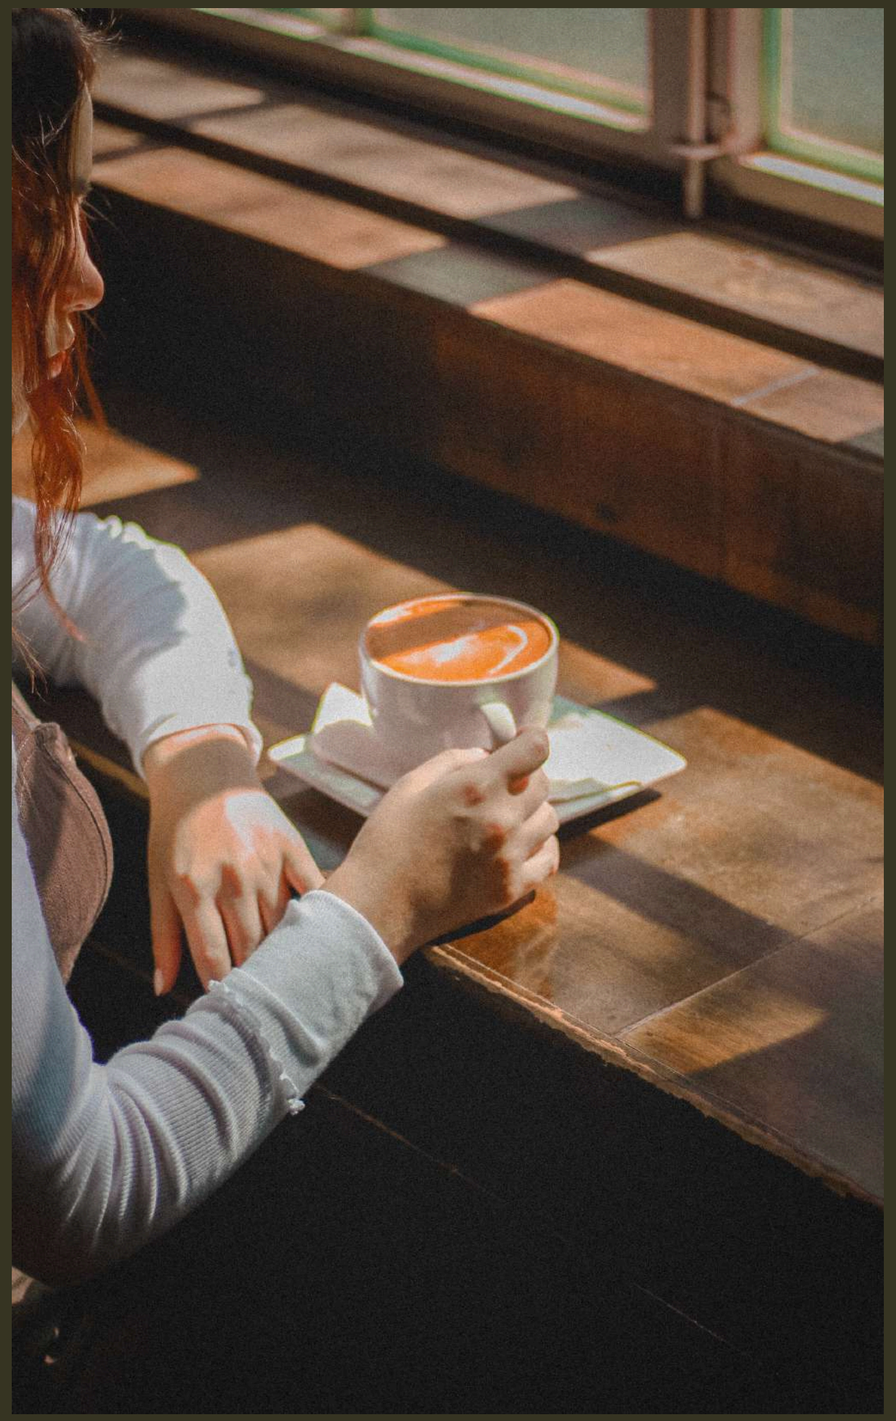
- Global Consistency: Average taste scores are remarkably stable across 15 countries, ranging from 5.37 to 5.67, showing uniform product quality worldwide.
- Top Markets: Brazil (5.67), Spain (5.64), and Canada (5.63) lead in popularity, suggesting perfect alignment with local tastes.
- Bangladesh Success: Ranking 4th (5.61), Bangladesh outperforms major markets like Japan and the USA, showing strong local brand reception.
- Growth Area: Slight dips in Germany (5.37) and Australia (5.4) present an opportunity for minor flavor adjustments to boost scores further.

```
SELECT
caffeine_preference, COUNT(*) AS count
FROM
tcoff
WHERE
caffeine_preference = 'High'
GROUP BY 1;
```

Result Grid | Filter Rows:

caffeine_preference	count
High	4880

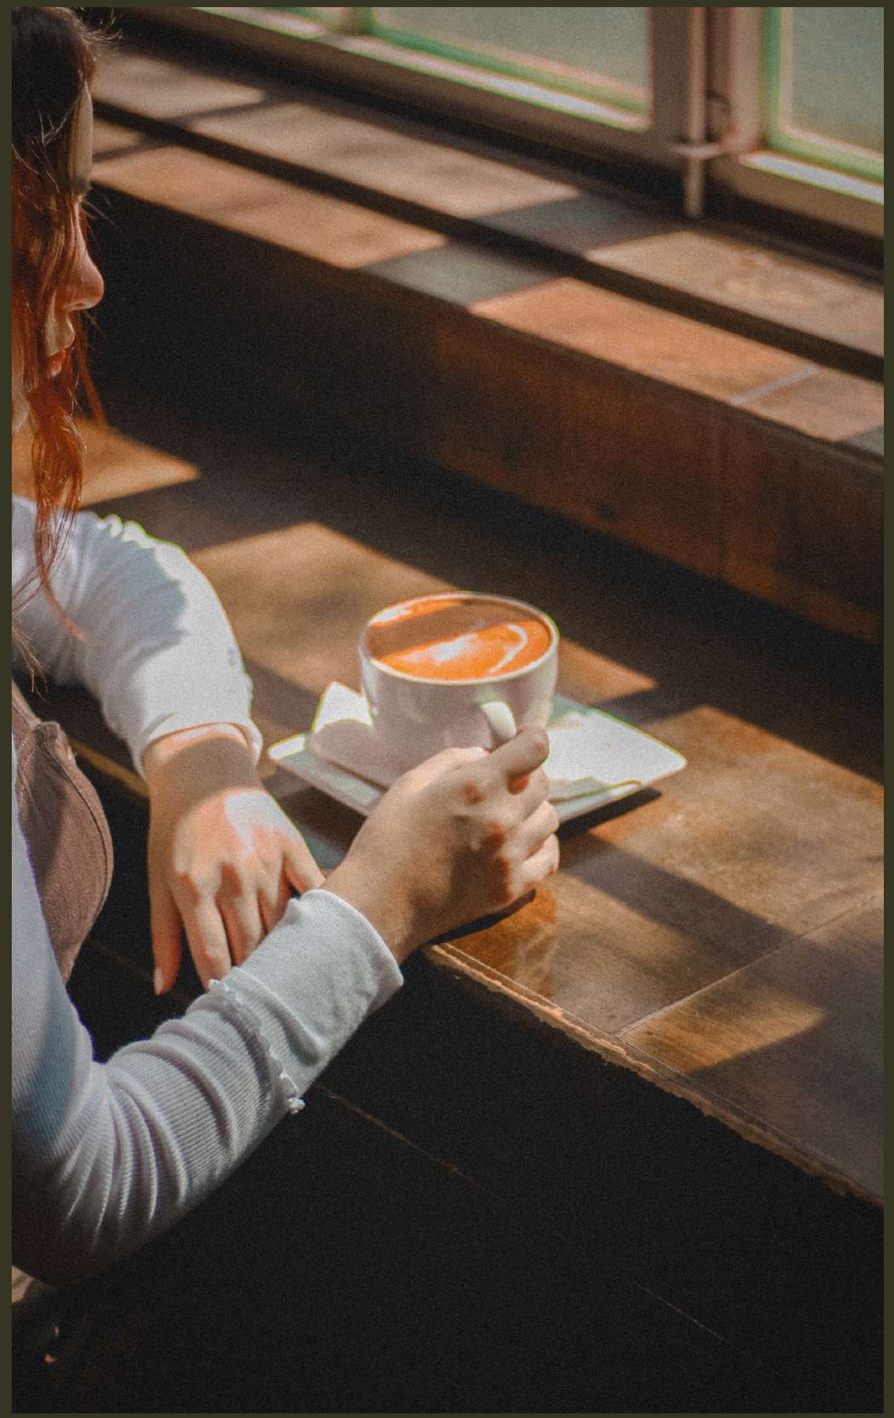
- Concise Insight :
- Strong Energy Demand: A total of 4,880 customers have a "High" caffeine preference. This indicates a significant market segment that prioritizes strong, energy-boosting beverages.
- Targeted Inventory: Since nearly 5,000 customers specifically look for high caffeine, the business should ensure a steady supply of dark roasts or double-shot options to meet this high-energy demand.



```
SELECT
time_of_day, COUNT(drink_preference) AS
most_popular_time
FROM
tcoff
WHERE
drink_preference = 'Tea'
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

time_of_day	most_popular_time
Evening	1957

- Concise Insight :
- Peak Tea Time: The data identifies Evening as the most popular time for tea drinkers, with 1,957 preferences recorded.
- Operational Strategy: Since tea demand peaks in the evening, the business can optimize inventory and staff specifically for tea service during this window. This is a great opportunity for "Evening Tea" specials or snack pairings.
-

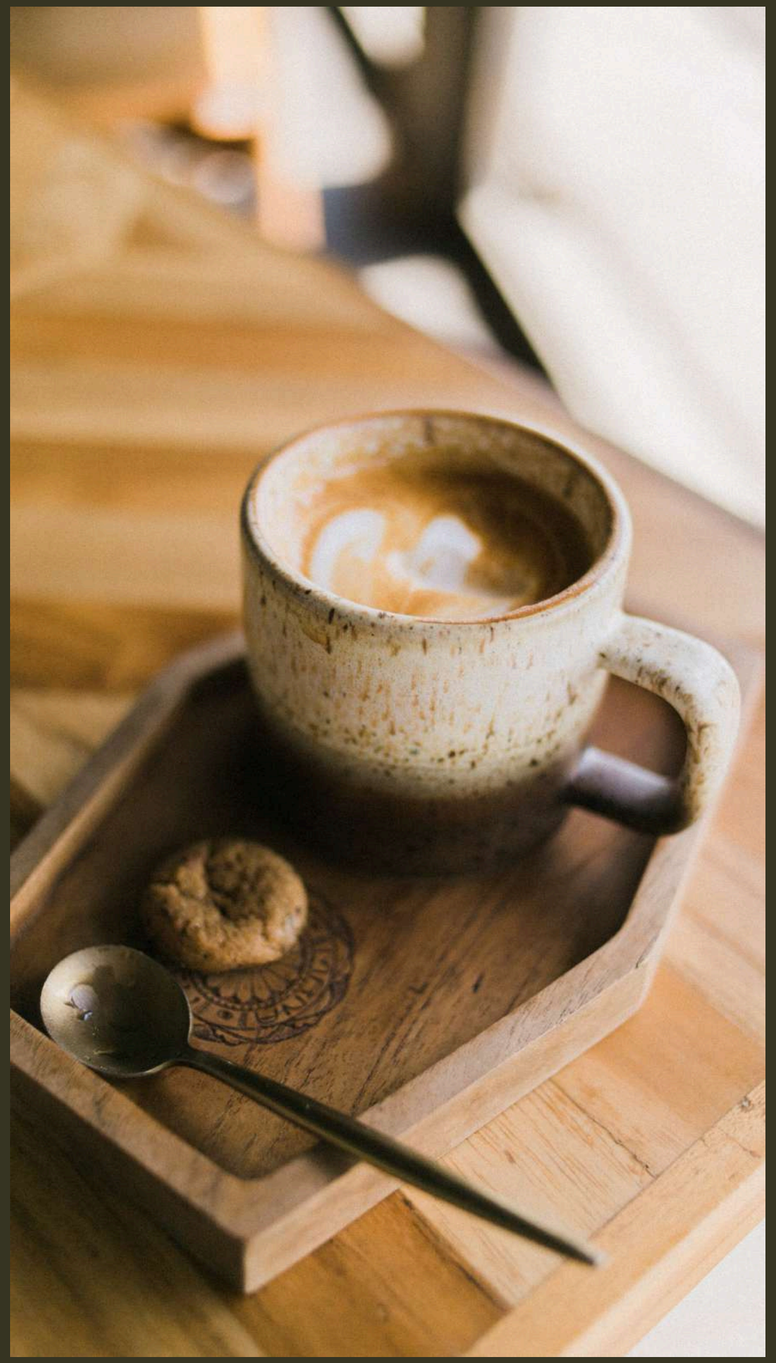


```
SELECT
loyalty_brand,
ROUND(AVG(satisfaction_level), 2) AS Satisfaction_Rating
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC;
```

Result Grid | Filter Rows:

loyalty_brand	Satisfaction_Rating
Explorer	5.03
Brand Loyal	5.02

- Concise Insight :
- Consistent Satisfaction: Satisfaction ratings are virtually identical between Explorer (5.03) and Brand Loyal (5.02) customers. This indicates that both new/experimental customers and long-term loyalists are equally happy with the product.
- Brand Stability: The near-perfect balance shows that your brand quality is stable; it doesn't just rely on loyalty to maintain a good rating, nor does it fail to impress new explorers.
- Marketing Strategy: Since satisfaction is high across both groups, you can focus on converting "Explorers" into "Brand Loyal" customers through targeted loyalty programs without worrying about a gap in product experience.

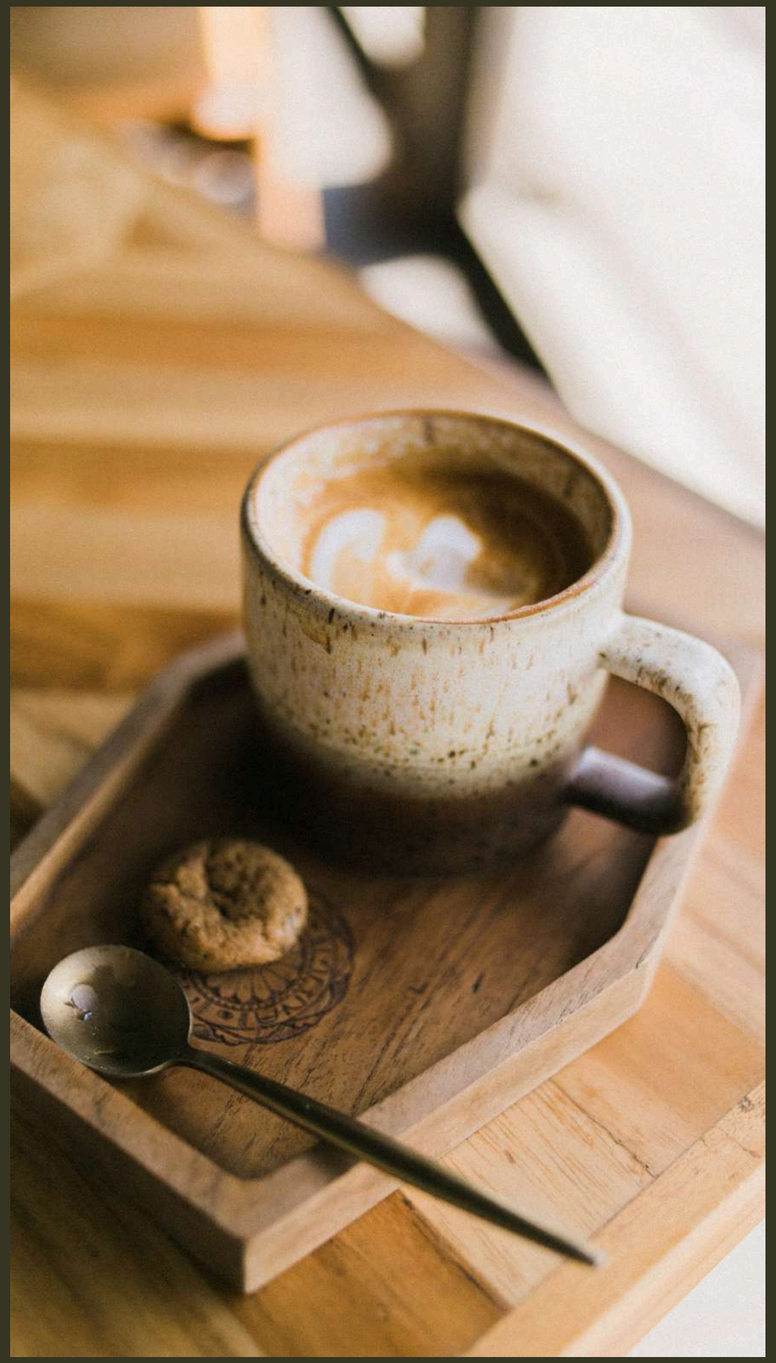


```
SELECT
country, ROUND(AVG(aroma_score), 2) AS Aroma_score
FROM
tcoff
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Rows

	country	Aroma_score
▸	Italy	5.61

- Concise Insight :
- Aroma Leader: Italy has emerged as the top country for aroma satisfaction, achieving a high average score of 5.61.
- Cultural Alignment: Given Italy's rich coffee culture, this result suggests that the product's aromatic profile aligns perfectly with the high standards of Italian consumers.
- Marketing Edge: You can use this data to market your product as "Italian-approved" or highlight its premium aroma in international branding to build trust in quality.
-



```
SELECT
income_level, favorite_drink, COUNT(favorite_drink) AS count
FROM
tcoff
WHERE
income_level = 'Low'
GROUP BY 1 , 2
ORDER BY 3 DESC
LIMIT 1;
```

Result Grid | Filter Rows:

income_level	favorite_drink	count
Low	Cold Brew	431

- Concise Insight :
- Preference Among Low Income: For the Low income segment, Cold Brew is the top favorite, with 431 customers choosing it.
- Affordability vs. Value: This suggests that Cold Brew is perceived as a high-value or preferred treat within this demographic. Offering competitive pricing or "value combos" for Cold Brew could further increase sales in this segment.
- Contrast with High Income: Interestingly, while high-income earners preferred Mocha (230), the low-income segment shows a much stronger volume of preference for Cold Brew. This clear distinction helps in segment-specific product placement.

```
SELECT
time_of_day, COUNT(favorite_drink) AS count_drink
FROM
tcoff
GROUP BY 1
order by 2 desc;
```

Result Grid | Filter Rows:

	time_of_day	count_drink
▶	Evening	3827
	Night	3758
	Afternoon	3726
	Morning	3689

- Concise Insight:
- Steady Demand: The data shows a very consistent demand for drinks throughout the entire day. The counts for Evening (3,827), Night (3,758), Afternoon (3,726), and Morning (3,689) are remarkably close.
- Peak Period: While all times are popular, the Evening remains the peak period for drink consumption, followed closely by the Night.
- Business Impact: Since there is no significant "dead time," the business must maintain high operational efficiency and staffing across all shifts. Your product is clearly a staple that customers enjoy from morning until late at night.

Thank You
